## NEMAGARD

Nemagard, containing the *S. scarabaei* nematode, is setting a new high standard for biological control of white grubs and other insect pests. Nemagard is especially virulent against white grubs as it attacks any stage of their life cycle, including hard-to-control third instar larvae. Nemagard can be stored at room temperature or up to 12 weeks and mixes easily into solution. Nemagard is effective in a wide range of soil conditions and in soil temperatures above 14°C, allowing for treatment of grubs throughout September and into October.
